☎ (+212) 0684653903 📍 Tangier, Morocco

PROFESSIONAL EXPERIENCE

Data Engineer

Moroccan ministry

March 2021- Present - Tangier

- Designed and developed data visualization dashboards using Tableau and Power BI to support data-driven decision-making.
- Developed data quality management processes and implemented automated data validation scripts.
- Created data models and optimized database tables for improved performance.
- Designing and implementing programs capable of extracting, transforming, and loading data generated by Moroccan government election management websites in 2021, using Python, Selenium, and Java.

Data Engineer

ALTEN DELIVERY CENTER

January 2018- February 2021 - Fez

- Designed and developed ETL pipelines using Python, Spark, and Kafka to integrate multiple data sources and build a unified data model.
- Worked with cross-functional teams to design and implement ETL pipelines using Python and Hadoop for data processing and storage.
- Developed and maintained data pipelines that were scalable, reliable, and high-performing.
- Managed on-premise data center and ensured proper maintenance of servers, storage, and networking devices.
- Designed and optimized data models, schema design, and database tables in PostgreSQL and MySQL databases.
- Designed and deployed scalable data storage solutions using AWS S3 and Redshift.
- Managed data quality and integrity through data validation, data cleansing, and data transformation.

EDUCATION

Master's Degree in Big Data

Euro-Mediterranean University in Fez

September 2017- July 2019

SUMMARY

Data engineer with over 5 years of experience designing, building, and maintaining data pipelines and infrastructure. Proficient in data modeling, ETL processes, and data warehousing. Skilled in programming languages including Python and SQL. Strong understanding of cloud computing platforms including AWS and GCP.

SKILLS

- Programming Languages: Python, Java
- Big Data Technologies: Kafka, Spark, Hadoop
- Databases: PostgreSQL, MySQL, MongoDB
- Cloud Platforms: AWS (Redshift, S3), GCP.
- On-Premise: Datacenter, server, storage management
- ETL Processes: Data modeling, database design, data integration, data warehousing
- Data Quality Management: Data cleansing, data validation, data transformation
- Data Visualization Tools: Tableau, Power BI
